

Aritra Roy

Computational Chemist

RA/PhD Student at **London South Bank University**. Researching Ferroelectric Domain Walls manipulation using ML-AI.

Interested in Theoretical Research of **Semiconductor, Defects, Ferroelectric Materials, Electronic Structures, TD-DFT, MD Simulations, Programming** and **AI-ML**.

Programming Skills & Tools

- Python 3.x SciPy NumPy Matplotlib MATLAB C Programming Java HTML5 CSS3 JavaScript React React Native SASS
- GitHub Git Version Control Visual Studio Code Node Package Manager (npm) Yarn Firebase Expo CLI Chrome DevTools Netlify Deploy GitHub Pages

RESEARCH

- Research Assistant/Doctoral Researcher at London South Bank University *Sep, 2023 - Present*
- Research Collaborator at National Institute of Technology Silchar *Nov, 2022 - Present*
- Guest Researcher at Fantuzzi Group, University of Kent *Jun, 2022 - Present*

EDUCATION

- M.Sc. in Chemistry from Pondicherry University (3rd Position) **CGPA 8.88 | Jul, 2019 - Aug, 2021**
- B.Sc. in Chemistry from Ramakrishna Mission Vivekananda Centenary College, Rahara **CGPA 7.34 | Jul, 2016 - May, 2019**
- 10+2 Board Exam from Nabadwip Bakultala High School **89.2% | May, 2015 - Jun, 2016**
- Madhyamik Board Exam from Nabadwip Bakultala High School **90% | Jul, 2016 - May, 2019**

CHEMISTRY PROJECTS

- **Piezoelectric Materials Prediction Using Text-mined Data and Deep Learning**
DOI: NA (Ongoing PhD Project) **Oct, 2023 - Present**
Dr. John Buckeridge (LSBU, UK): Doctoral Researcher
We are focusing for using text-mined journal article data for piezoelectric materials to find novel piezoelectric materials with higher d33 values.
- **A Copper Complex Receptor for Nanomolar Sulfide Sensing and Applications in DNA/BSA Binding**
DOI: NA (Submitted for Review) **Oct, 2023 - Present**
Dr. Biswa Nath Ghosh (NIT Silchar, India): Collaborator
Finding sulfur sensing mechanism with Cu(II) metal-ligand complex due to its crucial significance in various biological, environmental, and industrial processes along with finding applications in DNA/BSA bindings.
- **Surface Adsorption and Encapsulated Storage of H₂ in a Cage-like (MO)_x Cluster**
DOI: NA (Final Draft) **Aug, 2022 - Present**
Dr. Saeedeh Kamalinahad (Arak University, Iran): Collaborator
We will investigate the surface adsorption and encapsulated storage of H₂ molecules in a cage-like metal-oxide cluster. This is completely a theoretical project collaborating with Dr. Saeedeh and Dr. Felipe from Kent University.
- **Electronic Structure and Reactivity of an Allyl-Like Trialuminium Compound**
DOI: NA (Submitted for Review) **Jun, 2022 - Present**
Felipe Fantuzzi Group (Kent University, UK): Guest Researcher
Our main objective is to find the reason behind the abnormal C-C activation in a allyl-like trialuminium compound and its reactivity using DFT calculations to support the experimental work (theoretical+experimental collaborative project). The experimental group is led by Prof. Dr. Holger Braunschweig from University of Würzburg.
- **DFT study for selective amino acid (L-Cysteine) sensing by a Cu(II)**
DOI: 10.1039/D3SD00183K  **Dec, 2022 - Oct, 2023**
RSC Sensors & Diagnostics (Gold Open Access)
Dr. Biswa Nath Ghosh (NIT Silchar, India): Collaborator
Finding different binding modes of Cysteine amino acid with Cu(II) metal-ligand complex due to its crucial significance in various biological processes, such as energy transduction, protein regulation, and cell signaling.

- **Finding a More Stable Semiconductor Borophene Using the Theoretical Approach**
DOI: 10.13140/RG.2.2.18066.32965 (M.Sc. Thesis)  *Dec, 2020 - Jul, 2021*
Chemical Information Science Laboratory (Pondicherry University, India)

The basic pupose of this project was finding a kinetically stable semiconductor borophene for application purposes using Quantum Calculations like DFT.

PROGRAMMING PROJECTS

- **Google Contacts Using Gmail API**   *Three Days*
A python program to get the contacts associated with Google Account. Python3.x and Gmail API is used to get all the contacts. Also a blog has been written based on this project on Medium platform.

Achievements

- This one is my **first python project** and also I've written my **first blog** based on this project.
- **Gmail API gives us the permission to get all the contacts** stored in Google Contacts.
- Without Gmail API **maximum 30 contacts** can be fetched from Google Contacts.
- The blog based on this project was published under one of the well-known Analytics and Data Science Company **Analytics Vidhya**.

- **CompChemNews Bot Using Python & Tweepy**    *One Week*

A Twitter Bot made using python tweepy and beautifulsoup4 module for automatically getting latest news in the field of Computational Chemistry.

Achievements

- The Twitter Bot is made using **python3.x** programming language.
- Learned two new python modules **tweepy** and **beautifulsoup4 (bs4)**.
- Also learned to host a python program online and schedule the script to run per day using **WayScript Time Trigger**.
